Task 1: Document Modelling

The screenshot displays the MongoDB Compass interface, showing a document modeling session. The left sidebar lists connections, including 'AI&DS 2' and '2520080053_Ruhitha'. The main editor shows a JSON document for a book, and the terminal window shows the command to insert the document into the 'book_metdata' collection.

Task 4: Indexing for Speed

a) Create a text index on review comments

```
}  
> db.book_metadata.createIndex({ "reviews.comment": "text" });  
< reviews.comment_text  
2520080053_Ruhitha>
```

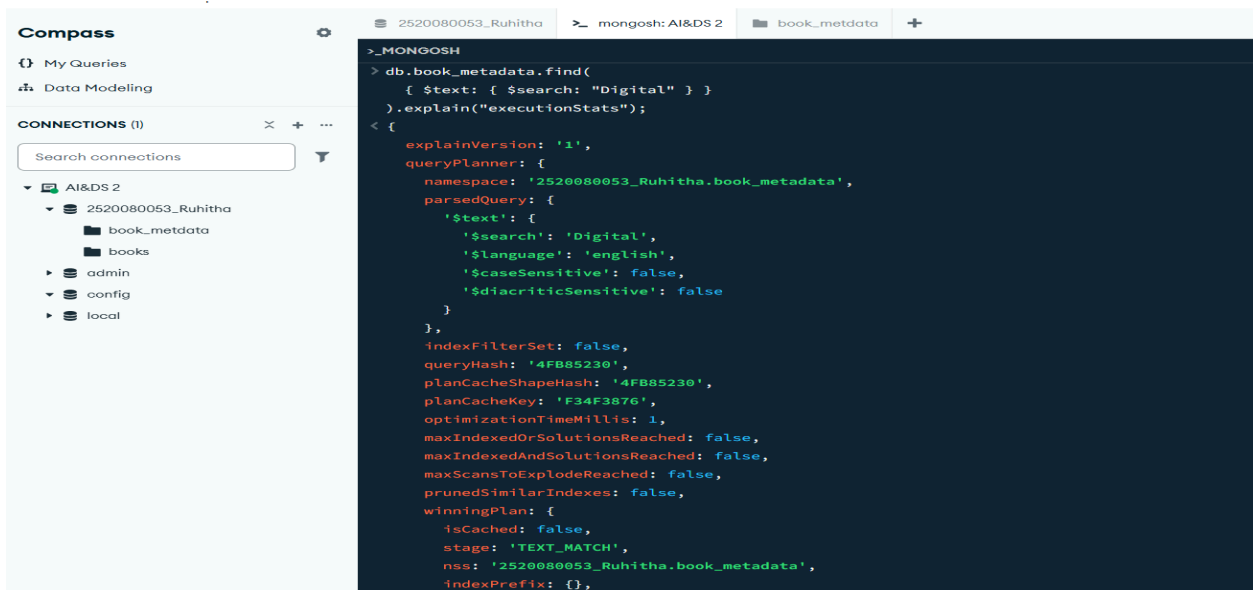

b) Query using the text index

The screenshot shows the MongoDB Compass interface. On the left, the 'CONNECTIONS' panel shows a connection to 'AI&DS 2' with a database named '2520080053_Ruhitha'. The main panel displays the MongoDB shell output for a query. The query creates a text index on the 'reviews.comment' field and then finds documents where the comment is 'Digital'. The results show three documents with their scores.

```
>_MONGOSH  
{  
  totalReviews: 2,  
  author: 'R. Menon',  
  title: 'The Silent Algorithm',  
  avgReviewRating: 4.5  
}  
> db.book_metadata.createIndex({ "reviews.comment": "text" });  
< reviews.comment_text  
> db.book_metadata.find(  
  { $text: { $search: "Digital" } },  
  { title: 1, score: { $meta: "textScore" } }  
)<sort({ score: { $meta: "textScore" } });  
< {  
  _id: ObjectId('6a8d20a1e9b1256610eda46f'),

}

```

c) Verify index usage with .explain()

The screenshot shows the MongoDB Compass interface. The main panel displays the MongoDB shell output for a query using the .explain() method. The output shows the execution plan, including the index used (TEXT_INDEX) and the query planner details.

```

e) Supporting index for common queries (multikey index)

The screenshot shows the MongoDB Compass interface. On the left, the 'CONNECTIONS (1)' panel lists the connection '2520080053_Ruhitha' with databases 'book_metadata' and 'books'. The main panel displays the following MongoDB commands in the MONGODB shell:

```
> db.book_metadata.createIndex({ formats: 1 });
db.book_metadata.createIndex({ avgRating: -1 });
db.book_metadata.find({ avgRating: { $gt: 4 } }).explain("executionStats");
```

The output shows the execution plan for the query:

```

  explainVersion: '1',
  queryPlanner: {
