

S. No.	Paper Title	Authors & Year	Journal / Conference	Problem Addressed	Method / Technology Used	Key Findings	Limitations / Gap
1	Designing and Implementing e-Justice Systems: An Information Systems Approach to Regional Trial Court Case Docket Management in Northern Mindanao, Philippines	Benzar Glen Grepon, 2020	arXiv / e-Justice Systems Research	Manual and standalone court docket systems create difficulties in storing, processing and retrieving case information.	Web-based Case Docket Information System using an SDLC-based development approach.	Digital case management improved the efficiency and reliability of court transactions.	Focused on a specific court environment; broader analytics and integration could be further developed.
2	Legal Information Retrieval Systems: State-of-the-Art and Open Issues	Carlo Sansone & Giancarlo Sperli, 2022	<i>Information Systems</i>	Legal professionals need efficient retrieval from large collections of digital legal documents.	NLP, Machine Learning and legal information-retrieval techniques.	Identified major approaches for retrieving relevant legal documents, cases and legal provisions.	Focuses mainly on information retrieval rather than complete case-file management and database analytics.
3	Development of Key Technologies of Legal Case Management Information System Based on J2EE	Jingjing Tao & Mingsheng Zhang, 2022	ICIKM 2022	Need for technological infrastructure to support legal case-management information systems.	J2EE-based legal case-management information system.	Demonstrated the use of enterprise technologies for implementing legal case-management functionality.	Technology-focused; detailed SQL analytics and dashboard-based case analysis are not the primary focus.
4	Case Management in the Electronic Civil Case System (E-Courts)	Otabek Pirmatov, 2022	<i>Jurisprudence</i>	Manual management of civil-case documents creates difficulties in registration, processing and retrieval.	Electronic case management and electronic document processing.	Electronic systems support registration, storage, transmission and retrieval of court documents.	Concentrates on electronic court procedures and documents rather than integrated
5	Query Generation and Buffer Mechanism: Towards a Better Conversational Agent for Legal Case Retrieval	Bulou Liu et al., 2022	<i>Information Processing & Management</i>	Traditional legal case retrieval is difficult because legal queries and documents are complex.	Conversational search, query generation and buffer mechanisms.	Improved the legal case-retrieval process through conversational information retrieval.	Focuses on intelligent retrieval rather than case-file management or relational database analytics.

S. No.	Paper Title	Authors & Year	Journal / Conference	Problem Addressed	Method / Technology Used	Key Findings	Limitations / Gap
6	Legal Case Document Similarity: You Need Both Network and Text	Paheli Bhattacharya et al., 2022	Information Processing & Management	Identifying similar legal cases requires understanding both textual content and relationships between cases.	Text-based and network-based modelling using Hier-SPCNet.	Combining text and network information improved legal case similarity and recommendation.	Focuses on case similarity rather than complete case lifecycle management and administrative analytics.
7	E-Justice Systems in Northern Mindanao: Transforming Regional Trial Court Case Docket Management	Ana Isabel Marquez Castillo, 2023	Michigan Journal of Multidisciplinary Research	Courts transitioning from manual to computerized systems face problems in storage, retrieval and administrative processes.	Electronic court information and case-management systems.	Digital systems can improve efficiency, transparency and accessibility of judicial information.	Focuses on digital transformation and implementation rather than database-level analytics.
8	Improving Judicial Administration: An Electronic Court Case Management System Approach	Onyia U.C., Olofin B.B. & Asogwa T.C., 2024	International Journal of Real-Time Applications and Computing Systems	Manual case management can contribute to delays and inefficient judicial administration.	Electronic court case-management approach.	Demonstrated the potential of electronic case management to improve judicial administration and access to case information.	Detailed relational modelling and analytical dashboard functionality are not the main focus.
9	Judicial Court Information Management System (J-CIMS) for Regional Trial Court in the Philippines	Aimee G. Acoba, 2024	Isabela State University Linker: Journal of Engineering, Computing and Technology	Need to digitize case filing, monitoring and hearing scheduling.	J-CIMS and electronic court-record keeping; ISO 25010 evaluation.	Digitized filing, case-status monitoring and hearing scheduling; users reported high system acceptance.	Focuses on court information management and usability rather than SQL-based analytics and DBMS concepts.
10	Features of Procedural Aspects of the Electronic Court Case Management System when Initiating a Civil Case	O.S. Pirmatov, 2024	Gosudarstvo i pravo	Need to understand how electronic systems support civil-case initiation and preparation.	Analysis of electronic court case-management procedures and international practices.	Highlights how electronic systems support case initiation and preparation for proceedings.	Primarily procedural/legal; database implementation and analytical reporting are not the main
